

[JAN 분석 보고서]

[아티팩트 상세 분석 보고서]

작성일	2025.07.01
작성자	강지민, 김예은, 배영혜, 안서진, 전소현, 정지윤, 김신아
검토자	김예은

목차

I. 기본 정보	3
II. 프로그램 개요.....	3
1. 프로그램 목적.....	3
2. 주요 기능 요약.....	3
III. 분석 목적	3
IV. 분석 도구 정보.....	4
V. 해시값	4
VI. 분석 아티팩트	5
1. 시스템 설치/실행 아티팩트.....	5
2. 파일 사용/조작 아티팩트	8
3. 메모리 아티팩트	9
4. 네트워크 아티팩트.....	11
5. 메신저 아티팩트	13
VII. 분석 차별점.....	29
VIII. 분석 요약	30
IX. 향후 계획	31
X. 참고 문헌	31

I. 기본 정보

프로그램 범주	LLM
프로그램	JAN
버전	v0.6.3
다운로드 경로	https://jan.ai/download

[표 1] 기본 정보

II. 프로그램 개요

1. 프로그램 목적

100% 오프라인으로 실행되는 ChatGPT의 대안으로, LLM을 쉽게 다운로드하여 실행하는 것을 목표로 한다. 완벽한 제어와 개인정보 보호를 통해 AI를 사용할 수 있도록 한다.

2. 주요 기능 요약

Llama, Gemma 등 다양한 로컬 AI 모델을 지원하며, localhost:1337를 통해 API 서버로 연동 및 활용이 가능하다.

III. 분석 목적

본 분석은 정상적인 프로그램인 JAN이 악의적인 목적으로 활용할 수 있다는 시나리오를 기반으로, 사용 시 생성되는 아티팩트를 포렌식 측면에서 식별하고, 관련 파일 및 레지스트리 등의 저장 경로를 분석하여 디지털 증거 확보 가능성을 평가하는 것을 목적으로 한다.

IV. 분석 도구 정보

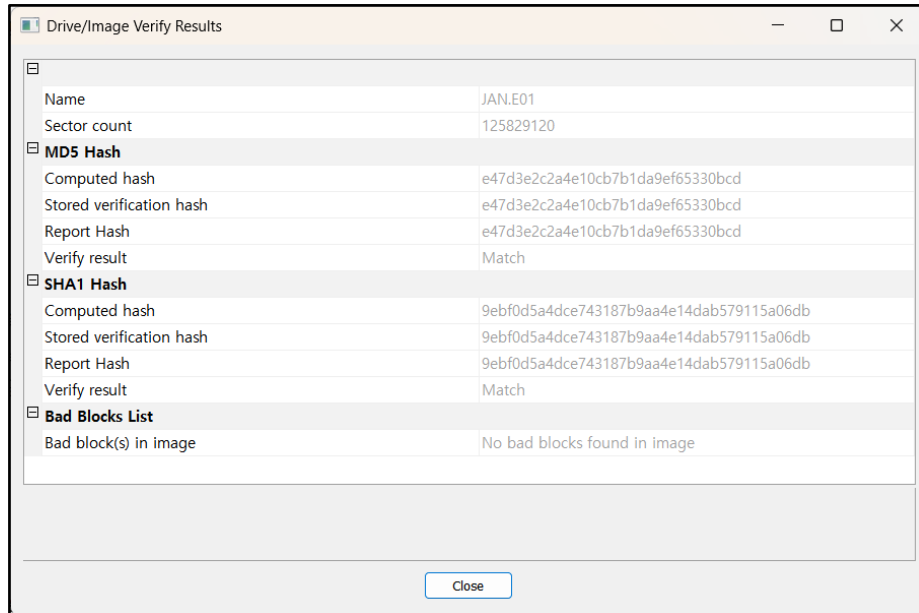

도구명	버전
FTK Imager	v4.7.3.81
ChromeCacheView	v2.52
HxD	v2.5
Wireshark	v4.4.6
NTFS Log Tracker	v1.8
WinPrefetchView	v1.37
Volatility	v3
Autopsy	v4.22.1
RegistryExplorer	v2.1.0
Notepad ++	v8.8.1

[표 2] 분석 도구

V. 해시값

해시	값
MD5	e47d3e2c2a4e10cb7b1da9ef65330bcd
SHA1	9ebf0d5a4dce743187b9aa4e14dab579115a06db

[표 3] 해시값

[그림 1] FTK Imager로 확인한 vmdk 해시값

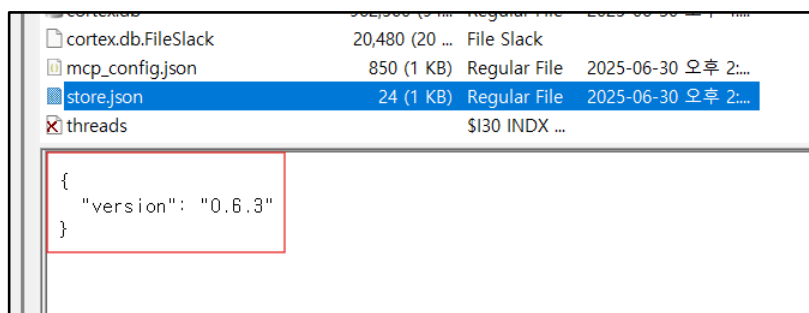

VI. 분석 아티팩트

1. 시스템 설치/실행 아티팩트

1) 프로그램 버전 정보

(1) 경로: C:\Users\WForen\AppData\Roaming\Jan\data\store.json

(2) 분석 내용: JAN 프로그램의 다운로드 버전 정보 확인 가능

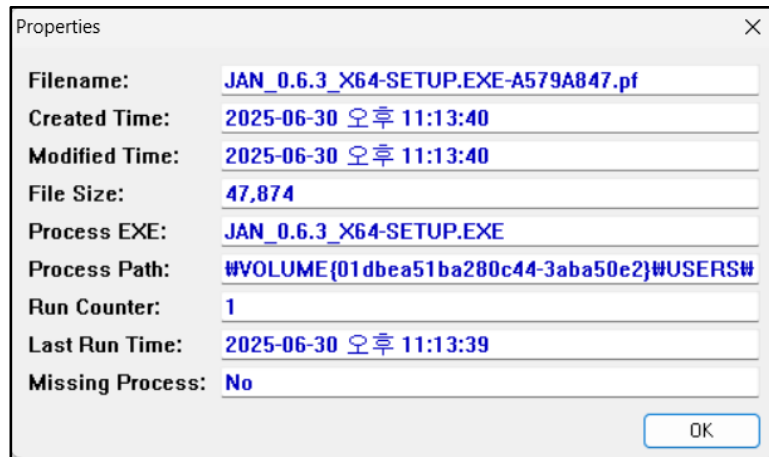

[그림 2] FTK Imager로 확인한 프로그램 다운로드 버전 정보

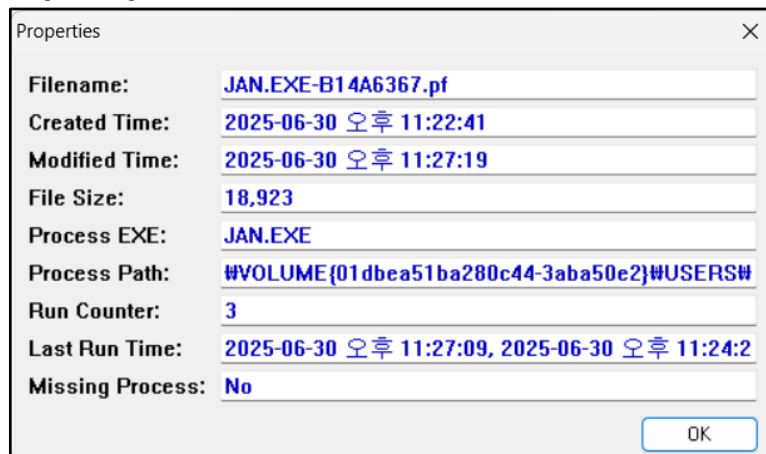

2) Prefetch 파일

(1) 경로: C:\Windows\Prefetch

- (2) 분석 내용: Prefetch 파일을 통해 JAN SETUP의 실행 시간과 JAN 프로그램의 실행 시간이 확인이 가능함

[그림 3] WinPrefetchView로 확인한 JAN SETUP 실행 시간

[그림 4] WinPrefetchView로 확인한 JAN 프로그램 실행 시간

3) LLM 모델 다운로드 폴더

(1) 경로:

C:\Users\Foren\AppData\Roaming\Jan\data\models\cortex.
so

- (2) 분석 내용: 로컬 환경에 설치된 LLM 모델인 Qwen 폴더가 버전별로 다른 다운로드 파일로 저장됨을 알 수 있다. Qwen을 제외한 다른 LLM 모델은 api-key를 사용하기 때문에 개별 폴더로 로컬에 저장되지 않음을 알 수 있다.

File List			
Name	Size	Type	Date Modified
qwen2.5	144 (1 KB)	Directory	2025-06-30 오후 2:...
qwen3	144 (1 KB)	Directory	2025-06-30 오후 4:...

[그림 5] FTK Imager로 확인한 Qwen 폴더 다운로드 정보

4) Extension 파일 설치 정보

(1) 경로: C:\Users\Foren\AppData\Roaming\Jan\logs\wapp.log

(2) 분석 내용: 해당 파일에서 Extension 파일 설치 경로 복사 및 등록 정보가 확인이 가능함

```
[2025-06-30] [14:22:43] [app_lib::core::download] INFO: App config not found, creating default config at "C:\Users\Foren\AppData\Roaming\Jan\WSettings.json"

```

[그림 6] FTK Imager로 확인한 Extension 파일 설치 정보

5) DB에 추가된 LLM 모델 정보

(1) 경로: C:\Users\Foren\AppData\Roaming\Jan\logs\cortex.log

(2) 분석 내용: JAN 내부 DB 파일에 추가 되는 LLM 모델의 정보가 확인이 가능함

3. 메모리 아티팩트

1) 프로세스 확인

(1) 분석 내용: python [vol.py](#) -f jan.vmem windows.pslist 을 통해 실행 중인 프로세스 리스트를 출력한 결과, jan.exe 가 실행 중인 것을 확인할 수 있었다. 또한, 해당 출력 결과를 통해 jan.exe 의 PID 를 확인할 수 있다. 확인한 PID는 다음과 같이 524 이다.

3936	796	WmiPrvSE.exe	0x9a876bed5340	14	-	0	False	2025-07-01 07:37:06.000000	UTC	N/A	Disabled

[그림 20] HxD로 확인한 서비스 도메인 접속

2) 사용자 IP 및 도메인 사용 여부

- (1) 분석내용: Jan 프로그램을 사용한 IP는 192.168.0.68로 확인되었다. 또한 Wireshark 분석 결과, 사용자 IP(192.168.0.68)에서 jan.ai 또는 관련된 도메인에 대한 명시적인 DNS 질의 및 SNI 필드는 확인되지 않았다. 이는 Jan 애플리케이션이 외부 접속 시 IP 주소 기반 통신을 수행했거나, GCP/CDN 등을 통한 간접적 도메인 연결을 사용했을 가능성이 있다. 대신 code.gist.build 및 storage.googleapis.com 등의

도메인 접속 이력은 확인되어, Jan 프로그램의 외부 리소스 접근 행위는 다른 도메인을 통해 이루어진 것으로 확인된다.

[그림 23] Wireshark로 확인한 DNS 질의 및 응답

4) QUIC 및 TCP를 통한 HTTPS 통신

(1) 분석 내용: 사용자 192.168.0.68에서 외부 IP 주소

34.120.195.249로 TCP 443 포트 및 QUIC 프로토콜을 통해 연결을 시도한 정황이 확인되었다. QUIC은 Google에서 개발한 UDP 기반의 보안 통신 프로토콜로, 주로 HTTP/3 트래픽에 사용되며, 웹 서비스 또는 API 통신 시 빠른 전송을 지원하기 위해 사용된다. 이때 접속 대상인 34.120.195.249는 Google LLC가 운영하는 Google Cloud Platform(GCP)에 소속된 IP로, 콘텐츠 전송 네트워크(CDN)에 할당된 것으로 확인되었다. 이를 통해 해당 장치가 GCP 기반의 외부 리소스(API 또는 모델 등)에 접근하거나 데이터를 요청한 정황을 추정할 수 있다.

27...	29.681442	192.168.0.68	34.120.195.249	TCP	54	49863 → 443 [ACK] Seq=1799 Ack=4160 Win=261888 Len=0

Completed at: 0, Content: [{"text": {"annotations": [], "value": "I want to conduct an OSINT (open-source intelligence) collection for the ABC_Corp_Executive_Strategy_Report_2025, you can organize the collectible information items into categories and identify recommended routes for gathering this information. Here's a structured approach:\n\n### 1. Company Overview\n- **Company Description**: Overview of ABC Corp, its mission, values, and history.\n- **Executives and Key Personnel**: Names, roles, and backgrounds of executives and other key figures.\n- **Locations and Facilities**: Headquarters, branch offices, manufacturing sites, etc.\n- **Recommended Routes**:\n  - Official Company Website\n  - LinkedIn (Company Page, Executive Profiles)\n  - News Articles and Press Releases\n\n### 2. Financial Information\n- **Annual Reports**: Access to previous annual reports for financial insights.\n- **Stock Performance**: Current and historical stock prices, analyst recommendations.\n- **Investor Presentations**: Slides and transcripts from investor meetings and conferences.\n- **Recommended Routes**:\n  - Official Company Website (Investor Relations Section)\n  - Financial News Websites (e.g., Bloomberg, Yahoo Finance)\n  - SEC Filings (for publicly traded companies)\n\n### 3. Products and Services\n- **Product/Service Portfolio**: Detailed descriptions of what ABC Corp offers.\n- **Research and Development**: Info on R&D efforts, new product announcements.\n- **Partnerships and Collaborations**: Details on strategic partnerships and joint ventures.\n- **Recommended Routes**:\n  - Official Company Website (Products/Services Section)\n  - Industry Reports and Market Research Studies\n  - Social Media and Corporate Blogs\n\n### 4. Strategic Initiatives\n- **Sustainability and CSR**: Efforts and reporting on corporate social responsibility and sustainability.\n- **Innovation and Technology**: Adoption of new technologies, digital transformation

      "annotations": [],
      "value": "To analyze the provided email list, let's break down the steps and tools we can use:\\n\\n### 1. Categorization by Domain\\nFirst, we need to categorize these emails by their domain to understand the distribution and identify potential targets for further OSINT collection.\\n\\n**Tool:** Email Domain Categorizer\\n\\n### 2. Identify ABC Corp Emails\\nSince our focus is on ABC Corp Executive Strategy Report 2025, identifying emails with the @abc.com domain is crucial. These emails are likely associated with ABC Corp employees.\\n\\n**Tool:** Filter emails with '@abc.com'\\n\\n### 3. Analyze Job Titles and Roles\\nExtracting job titles or roles from the email list can provide insights into the organizational structure and key personnel. However, without additional context (like names matched with job titles), this step involves matching common email username patterns with potential roles (e.g., 'admin' for administrative roles).\\n\\n**Tool:** Pattern Matching for Common Job Titles\\n\\n### 4. Social Media and Professional Networking\\nUsing the identified emails, we can attempt to find matching profiles on professional networking sites like LinkedIn. This can provide valuable information about the employees' roles, departments, and sometimes even their interests and connections.\\n\\n**Tool:** Social Media and Professional Networking Search\\n\\n### 5. Publicly Available Information\\nCombining the information from the previous steps with publicly available data (e.g., news articles, company press releases) can help build a comprehensive profile of ABC Corp and its strategy.\\n\\n**Tool:** Public Records and News Article Search\\n\\nGiven the email list, the initial step would be to categorize these emails by domain to understand the distribution across different domains. This can help in identifying potential targets for further OSINT collection, especially focusing on @abc.com for ABC Corp-related information.\\n\\nLet's proceed with categorizing the emails by domain to get an overview of the distribution:\\n- **@abc.com**: Emails directly associated with ABC Corp.\\n- **@xyzcorp.com**: Emails associated with XYZ Corp, potentially competitors or partners.\\n- **@securemail.com**, **@mailhost.net**, **@corpnet.org**, **@techlabs.com**: Emails from various other domains, potentially personal emails or from other organizations.\\n\\nThis categorization will guide further OSINT efforts, focusing on the @abc.com domain for insights into ABC Corp's executive strategy."},

"completed_at":0,"content":[{"text":{"annotations":[],"value":"Okay, I can help you design a mock penetration testing scenario that simulates malware delivery and communication with a C2 server, focusing on bypassing typical security measures. Let's break it down into steps:\n\n**Scenario: Spear Phishing with Macro-Enabled Office Document and Encrypted Payload**\n\n**Phase 1: Reconnaissance (Simulated)**\n\nAssume the attacker has already gathered information about the target organization (e.g., employee names, email addresses, common file types used).\n\n**Phase 2: Payload Creation**\n\n1. **Python Payload:** We'll start by creating a simple Python payload that, when executed, will connect to a C2 server (which we'll simulate). This payload needs to be able to run without the end-user needing to install Python, so we will compile it into a Windows executable.\n\n2. **Obfuscation:** We'll obfuscate the compiled executable to make it harder for antivirus to detect.\n\n3. **Encryption:** We will then encrypt the obfuscated executable to add another layer of protection. We will use a password that can be used within the VBA macro script.\n\n4. **Macro-Enabled Document:** Create a Word document (.docm) that contains a VBA macro. This macro will be designed to:\n    * Decrypt the embedded payload.\n    * Save the decrypted payload to disk.\n    * Execute the saved payload.\n\n5. **Social Engineering:** Design the email content to be believable and relevant to the target.\n\n**Phase 3: Delivery and Execution**\n\n1. **Spear Phishing Email:** Send the email with the malicious document attached to the target employee.\n\n2. **User Opens Attachment:** The target opens the Word document.\n\n3. **Macro Execution:** The user enables macros (this

[그림 52] cortex.log에서 삭제된 프롬프트 및 모델 확인

10) 수정된 프롬프트 확인 실험

(1) 경로: C:\Users\Wforensic\AppData\Roaming\Jan\data\logs
Wcortex.log

(2) 분석 내용: 프롬프트를 수정 후 확인 결과, 사용자가 입력한 수정
전 원문과 수정 후 원문까지 로그 파일에 그대로 기록되어
있었으며, 사용된 모델 정보 또한 함께 확인 할 수 있다.

[그림 54] 수정된 내용 및 모델 확인

VII. 분석 차별점

JAN은 종전에 분석한 LM Studio와 마찬가지로, ChatGPT, Perplexity, Claude와는 달리 사용자와 JAN 간의 모든 프롬프트 대화 내용을 문자열 그대로 threads 폴더 내 각 id 폴더에 json 및 jsonl 파일로 저장하여 직접 열람할 수 있다는 점에서 차별성을 보인다. 특히 json 파일은 title, instructions 키를 통해 사용자와 LLM 간의 대화 구조를 명확히 구분할 수 있으며, model_id, provider 키를 통해 사용된 LLM 모델 정보를 확인할 수 있다. 또한, 앞서 분석한 프로그램들과는 달리 삭제된 채팅 내용 및 수정된 채팅 내용을 cortex.log 파일을 통해 복원할 수 있다.

VIII. 분석 요약

아티팩트 유형	경로	설명
시스템 설치/실행 아티팩트	C:Users\Foren\AppData\Roaming\Jan\data\store.json	JAN 다운로드 버전 정보
	C:\Windows\Prefetch	JAN 설치 및 실행 기록
	C:Users\Foren\AppData\Roaming\Jan\data\models\cortex.so	LLM 모델 다운로드 기록
	C:Users\Foren\AppData\Roaming\Jan\logs\app.log	JAN Extension 파일 설치 기록
	C:Users\Foren\AppData\Roaming\Jan\logs\cortex.log	LLM 모델 DB 저장 기록
파일 사용/조작 아티팩트	C:Users\Foren\AppData\Roaming\Jan\data\janrc	JAN 로그, 세션 데이터 저장 정보
	C:\<root>\\$MFT , C:\<root>\\$Extend\\$\UsnJrnl , C:\<root>\\$LogFile	파일 생성 기록
네트워크 아티팩트	C:Users\forensic\AppData\Roaming\Jan\data\cortex.db	GCP 도메인 접속 기록
메신저 아티팩트	C:\Users\Foren\AppData\Roaming\Jan\data\threads\	대화 내역 및 사용 모델 확인 가능
	C:Users\forensic\AppData\Roaming\Jan\data\logs\cortex.log	삭제 및 수정된 내용 확인 가능

IX. 향후 계획

JAN 프로그램을 분석한 결과, 생성된 대부분의 아티팩트가 로컬에 저장되는 것으로 확인되었다. 이를 통해 JAN은 로컬 저장 방식을 채택하는 LLM 프로그램으로 분류할 수 있으며, 이는 LM Studio와 동일한 범주에 속한다. 따라서 본 연구에서는 이전에 분석한 ChatGPT와 Claude(서버 저장 구조) 및 LM Studio와 JAN(로컬 저장 구조)을 두 가지 저장 방식으로 구분하여 심층 비교·분석을 수행할 예정이다. 서버 저장 구조를 채택하는 ChatGPT와 Claude에 대해서는 프로세스 덤프를 기반으로 정밀 분석을 수행하고, 네 가지 프로그램(ChatGPT, Claude, LM Studio, JAN)의 API 요청 흐름 역시 종합적으로 심층 분석할 예정이다.
